

## Department of Cardiothoracic Surgery

The Cardiothoracic department in CMC is the oldest of its kind in the country. The department performs a wide range of surgeries which includes coronary artery bypass surgeries, valve replacements and surgeries for congenital heart abnormalities. They provide us with a 24-hour support. Several procedures like lead extraction, VT ablation requiring a window, epicardial left ventricular pacemaker lead placement in unfavourable coronary sinus anatomy and pacemaker implantation in neonates are performed with their support.
