

Department of Clinical Genetics

Department of Clinical Genetics was started in year 2007 with the objective to offer consultations, genetic counselling and prenatal diagnostic services to the patients and families with diverse genetic conditions. Department offers two years postdoctoral fellowship training programme and extends the clinical and diagnostic services to various specialties through Neuromuscular, Perinatal medicine and Genodermatoses clinics. Over the last decade it has evolved to collaborate with the Cardiology department and its various units for genetic profiling of inherited cardiomyopathies, rhythm disorders and various syndromes by conventional molecular techniques and Next generation sequencing using advanced Bioinformatics tools. Researches in these areas are continuing to contribute for better management for patients.
